André Viollaz

Buenos Aires, Argentina | fviollaz@dc.uba.ar | linkedin.com/in/andre-viollaz | github.com/aviollaz | aviollaz.github.io

SUMMARY

Computer Science student at the University of Buenos Aires with hands-on experience in backend development, data pipelines, workflow automation and LLM evaluation. Comfortable across the stack from x86 Assembly to FastAPI services, and focused on building systems that hold up in real use.

EXPERIENCE

AI Evaluator & QA **May 2026 – Present**
Outlier AI *Remote*

- Design hard prompts that state-of-the-art language models fail on and write corrected reference responses.
- Review other evaluators' submissions for accuracy, reasoning quality and guideline compliance.
- Build Docker environments for deterministic, reproducible model testing.

Freelance Automation Developer **Dec 2025 – May 2026**
Self-employed *Remote*

- Built a Make automation that replies to Google Maps reviews following brand guidelines, deployed across IRSA shopping centers; at Patio Bullrich alone it handles ~50 reviews a week, saving an estimated 10 hours of staff time per month.

PROJECTS

SmartCart – Grocery Cart Optimizer **Python, FastAPI, PostgreSQL**

- Nightly GitHub Actions scrapers collect the same 75 shelves from Coto, Día and Carrefour and unify them by barcode; live at smart-cart-rouge.vercel.app.
- Semantic product search with pgvector; a CP-SAT model (OR-Tools) splits the cart across chains, accounting for promotions, bank discounts, delivery costs and minimum purchases.
- FastAPI on Google Cloud Run, Postgres on Neon, React frontend on Vercel, 540+ automated tests, and an analytics microservice feeding Power BI.
- Discovered an obfuscated card skimmer in the online catalogs of Cencosud Argentina (Jumbo, Disco, Vea); reported it to Cencosud's security team and the national cybersecurity unit, and it was removed.

x86 Operating System Kernel **C, x86 Assembly**

- 32-bit kernel with protected-mode setup, interrupt handling, per-task paging with on-demand page faults, system calls and a preemptive scheduler running four tasks.

Credit Scoring Pipeline **Python, XGBoost, Streamlit**

- Default prediction on Kaggle's Home Credit data (307k applications): cleaning, feature engineering and an XGBoost model that catches 66% of defaulters on the hold-out set, served in a Streamlit dashboard.

Catering Management App – University of Buenos Aires **TypeScript, Node.js, PostgreSQL**

- Team project for the Databases course: orders, recipes, stock and purchasing on a schema-driven framework; contributed FK/PK validation and a test suite refactor.

OPEN SOURCE

osu! (ppy/osu) – PR #36027, merged **C#**

- Fixed a bug where background music speed in the quick play queue was affected by mods selected in song select; revised the fix after maintainer review to follow the project's per-screen configuration pattern.

EDUCATION

B.Sc. in Computer Science **2022 – 2027 (expected)**
Universidad de Buenos Aires *Buenos Aires, Argentina*

- Intermediate degree completed; approximately 70% of the program completed.

Data Science Program (8 months) **2021**
Digital House *Buenos Aires, Argentina*

SKILLS

Programming: Python, C, x86 Assembly, SQL, Bash

Backend & Data: FastAPI, PostgreSQL, pgvector, pandas, NumPy, XGBoost, OR-Tools, Power BI

Tools & Platforms: Git, Docker, Linux, GitHub Actions, Google Cloud Platform, Make

AI: LLM evaluation, prompt design, retrieval-augmented generation, Ollama

Languages: Spanish (native), English (C2)
